Tap to open, then hit **“Use this template”** to get your own copy

100% free | MIT license | YouTube + Reels | Core setup in minutes

🔎 Trend researcher
Weekly AI + business briefing. Fact-checks claims at the source before they go in a script.

💡 Ideas strategist
Turns videos that are already blowing up into ideas, titles and hooks for your channel.

🎨 Thumbnail designer
3 concepts using colour theory, then builds the one you pick in Photoshop by script.

🎬 Video editor
Edit plan, cut list, B-roll, sound effects, captions and Reels cut-downs from your transcript.

✨ Motion designer
Animated text, stats and callouts in Remotion, ready to drop into Premiere.

🗓️ Every Monday
`/weekly-plan` tells you exactly what to film: your YouTube video + 7 Reels.

SETUP

Get it running in *4 steps*

You need
A Claude plan that includes Claude Code (or an Anthropic API key)

Works on
Windows, Mac or Linux. Terminal, desktop app or VS Code

1 Install Claude Code

Get it at **claude.com/claude-code** and sign in. The desktop app is the easiest if you've never used a terminal.

2 Get your copy of the team

Open the **GitHub link** → **Use this template** → create your repo, then clone it. No GitHub account? Click **Code** → **Download ZIP** and unzip it.

3 Open the folder in Claude Code

Start a Claude Code session inside the folder. It reads `CLAUDE.md` and the agents automatically.

4 Tell it about your channel

`CLAUDE.md` is the brief every agent works from, so this is the step that matters most. Easiest way: let Claude interview you.

```
› Interview me about my channel (niche, audience, pillars, tone, how I film)
and fill in CLAUDE.md. Then build voice/VOICE.md from these transcripts of
my videos: [paste 2–3]
```

Why your brief matters

The more specific `CLAUDE.md` is, the better everything gets: real numbers, what you've tried, what your audience asks. Update it whenever something works or flops, and the whole team improves.

USE IT

Commands to *try first*

`/weekly-plan`	Research + what's already working → your YouTube video and 7 Reels for the week. You pick, it plans.
`/shorts-from-outlier <link>`	Paste a YouTube video that's blowing up. Get 5 Reels ideas with hooks and scripts in your voice.
`/thumbnail`	3 concepts with and without your face, then a layered Photoshop file built by script.
`/face-retouch`	Makes your face thumbnail-quality: reshoot checklist + a non-destructive Photoshop pass.
`/edit-video`	Edit plan from your transcript → cut list, B-roll, sound effects, captions, chapters and Reels.

Plain English works too: *"what's trending in AI this week?"*, *"rate my thumbnail"*, *"give me 5 Reels from this video"*.

How it stays good

- **Plan before spend.** Big jobs (thumbnails, edits, motion graphics) start with a one-screen plan and wait for your OK.
- **Adapt, never copy.** Other creators' hits are proof of demand. It takes the angle, never the title or script.
- **Evidence or it's a guess.** Ideas cite where they came from, and AI news gets checked at the source.

Optional upgrades

- **ffmpeg** for checking footage and cutting Reels.
- **Photoshop** to run the generated thumbnail scripts (File → Scripts → Browse...).
- **YouTube transcripts + free skill packs** for scripts, hooks and Instagram. Steps are in the README.

Built something with it?

Send me what your team made.
